<b>Subject Overview:</b>	<p>This subject is a specialised oenology subject that builds on the principles and practices developed in the oenology components of <b>AGRI90031 Winegrowing</b> (<a href="#">../view/2015/AGRI90031?output=PDF</a>) and <b>AGRI90032 Winegrowing Operations</b> (<a href="#">../view/2015/AGRI90032?output=PDF</a>). It reviews the results of recent wine research and provides in-depth treatment of a range of winemaking techniques and practices. The subject examines advanced and alternative production processes including the management of fermentation, optimising the activity of yeast and bacteria, additions and fining, as well as the assessment of grape quality, waste management, laboratory analysis techniques and equipment selection. The interrelationship between these aspects of the winemaking process is examined to provide an appreciation of the impact that these diverse contributions can make. It is envisaged that the detailed study of these facets will provide the student with an authoritative knowledge of winemaking and the processes that optimise wine quality.</p>
