

## MC-GENCOUN Master of Genetic Counselling

<b>Year and Campus:</b>	2016 - Parkville
<b>CRICOS Code:</b>	061969D
<b>Fees Information:</b>	Subject EFTSL, Level, Discipline & Census Date, <a href="http://enrolment.unimelb.edu.au/fees">http://enrolment.unimelb.edu.au/fees</a>
<b>Level:</b>	Graduate/Postgraduate
<b>Duration &amp; Credit Points:</b>	200 credit points taken over 24 months full time. This course is available as full or part time.
<b>Coordinator:</b>	Mrs Margaret Sahhar

<b>Course Overview:</b>	<p>Genetic counsellors work in a multidisciplinary team with clinical geneticists, nurses, social workers, dietitians, communicating complex genetic information to individuals and families to facilitate decision making. Genetic counsellors are employed in clinical genetics units and work in many areas including: cancer genetics, predictive testing, paediatric genetics, prenatal genetics, adult genetics. Genetic counsellors increasingly are involved in qualitative and quantitative clinical genetic research.</p> <p>The <b>Master of Genetic Counselling</b> constitutes the professional qualification for entry into employment as an associate genetic counsellor, and for Part 1 certification, awarded through the Board of Censors in Genetic Counselling (Human Genetics Society of Australasia).</p> <p>The 2 year <b>Master of Genetic Counselling</b> is designed to build and increase skills and breadth in clinical practice and research, utilizing the expertise of tutors who are clinicians, genetic counsellors, scientists, people with a disability and community members. The Masters is taught within the clinical genetics service Genetic Health at the Royal Childrens Hospital Parkville Victoria. Students are encouraged to attend educational activities within Genetic Health including seminars, clinic meetings and journal club.</p> <p>The Graduate Diploma is an exit point after 1 year of study in the Masters.</p> <p>Internationally, genetic counselling is taught within a 2 year clinical Masters. The Masters program aims to increase research and employment opportunities for graduates through developing reciprocity with other countries. With well established links to overseas training programs there are international opportunities for students, through an active exchange program for clinical placements and research collaborations. Past graduates are employed throughout the world -including in Singapore, Malaysia, New Zealand. It is expected that graduates of the Melbourne Masters will be eligible to register to practise as genetic counsellors in the UK and Canada, further increasing employment opportunities.</p> <p>The Master of Genetic Counselling will fulfil the requirements for certification and employment as a genetic counsellor in Australia and reciprocity with training overseas. The program teaches counselling skills, research skills and clinical genetics knowledge in small interactive student groups. Problem Based Learning is one mode of teaching in the genetics tutorials. This mode of teaching facilitates independent learning which equips the student to continue to develop professionally throughout their career. Students will complete a minor thesis with supervision, and have extensive counselling skills practice in varied clinical genetics and community settings. Assessment tasks mirror the skills needed in genetic counselling practice and for professional certification by the HGSA(Part 2)</p> <p>Teaching staff are primarily practising genetic counsellors, scientists and clinicians within the clinical genetics service.</p>

**Learning Outcomes:****Research and Evaluation Skills:**

- # Develop skills of research methodology from the Graduate Diploma to effectively implement original supervised clinical research;
- # Understand the ethic committee process and develop an ethics proposal;
- # Undertake a critical literature review relevant to a particular topic of research;
- # Develop original research arising from clinical practice;
- # Present findings from a original research project at a professional forum;
- # Understand the principles of qualitative research, including research design and process in an ethical framework OR
- # Understand biostatistical concepts and methods and their application in the assessment and management of health conditions OR
- # Develop an understanding of the nature and purposes of health program evaluation.

**Critical Reflection and Cognition Skills:**

- # Develop counselling skills through application of models of practice, in supervised clinical placements;
- # Critically evaluate different models of practice through theory, observation and participation in genetic counselling interviews;
- # Respect differences in cultural, religious and socioeconomic beliefs in clients, through developing a critical understanding of difference through the literature and personal contact with clients;
- # Develop self-awareness through reflection and active participation in the process of supervision.

**Communication Skills:**

- # Analyse the genetic counselling process and the impact on families from a cultural, ethical and psychosocial perspective;
- # Understand and critically analyse the process of transference and counter transference in an interview;
- # Critically analyse the process of communication.

**Ethical Skills:**

- # Understand the ethical principles that guide and inform genetic counselling practice;
- # Consider personal, cultural and moral values which may impact on the individual practice of genetic counselling;
- # Recognise the ethical challenges that may confront clients;
- # Understand and identify the potential for ethical challenges in emerging new genetic technologies;
- # Identify possible challenges to facilitating informed consent and maintaining patient confidentiality.

**Genetics Knowledge:**

- # Understand the principles of inheritance;
- # Understand chromosomal disorders and the genetic basis of disease;
- # Understand clinical genetic risk assessments for patients and families;
- # Elicit and document a family history and family pedigree, convey genetic information and discuss risk;
- # Understand the normal stages of human embryo developments and have an awareness of how this can be disrupted;
- # Understand the role of genetics as the underlying cause of various disorders of the human body;
- # Understand the role of genetics in cancer;
- # Have an appreciation for the range of molecular, cytogenetic and biochemical laboratory tests utilised in clinical genetic practice;
- # Understand the genetic testing approach taken for specific genetic disorders;
- # Understand the treatment approach taken for specific genetic disorders;
- # Understand the issues relating to population based screening;
- # Understand the role of prenatal screening and testing in pregnancy management and care, and the options available when fetal abnormality is detected;
- # Understand the organisational and economic aspects of health care in Australia;

	<ul style="list-style-type: none"> <li># Understand the role of the genetic counsellor in the context of the multidisciplinary approach to clinical genetic health care;</li> <li># Understand the principles of the legal and professional duties and the responsibilities of genetic counsellors as health professionals and members of a health care team.</li> </ul>																																							
<b>Course Structure &amp; Available Subjects:</b>	<p>Students will complete all 11 core subjects (200 credit points) to graduate with a Master of Genetic Counselling.</p> <p>Graduate Diploma in Genetic Counselling is available after completion of year one (100 credit points), only as an exit award. Completion of the Graduate Diploma in Genetic Counselling does not satisfy requirements to register as a practicing Genetic Counsellor.</p>

<b>Entry Requirements:</b>	<ol style="list-style-type: none"> <li>1. In order to be considered for entry, applicants must have completed: <ul style="list-style-type: none"> <li>• an undergraduate degree with a cognate genetics subject at second year level, or equivalent; and</li> <li>• a personal statement.</li> </ul> Meeting these requirements does not guarantee selection. </li> <li>2. In ranking applications, the Selection Committee will consider: <ul style="list-style-type: none"> <li>• prior academic performance; and</li> <li>• the personal statement.</li> </ul> </li> <li>3. The Selection Committee may seek further information to clarify any aspect of an application in accordance with the Academic Board <b>rules (<a href="http://about.unimelb.edu.au/academicboard/resolutions">http://about.unimelb.edu.au/academicboard/resolutions</a>)</b> on the use of selection instruments.</li> <li>4. Applicants are required to satisfy the university's English language requirements for postgraduate courses. For those applicants seeking to meet these requirements by one of the standard tests approved by the Academic Board, performance <b>band (<a href="http://about.unimelb.edu.au/academicboard/resolutions">http://about.unimelb.edu.au/academicboard/resolutions</a>) 7</b> is required.</li> </ol> <p><b>Notes</b></p> <ul style="list-style-type: none"> <li>• Applicants will be shortlisted for interview based on rank</li> <li>• Preference is given to applicants who have demonstrated relevant volunteer or professional experience.</li> </ul>																																							
<b>Core Participation Requirements:</b>	For the purposes of considering requests for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Students Experiencing Academic Disadvantage																																							

	<p>Policy, academic requirements for this subject are articulated in the Subject Overview, Objectives, Assessment and Generic Skills sections of this entry. It is University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and Student Equity and Disability Support: <a href="http://services.unimelb.edu.au/disability/">http://services.unimelb.edu.au/disability/</a></p>
<p><b>Graduate Attributes:</b></p>	<p>Knowledge Graduates of the Master of Genetic Counselling Degree will have acquired:1. a body of knowledge that includes the understanding of recent developments in a discipline and/or area of professional practice in the discipline of Genetic Counselling2. knowledge of research principles and methods applicable to a field of work or learning in the discipline of Genetic Counselling Skills Graduates of the Master of Genetic Counselling Degree will have developed:1. cognitive skills to demonstrate mastery of theoretical knowledge and to reflect critically on theory and professional practice or scholarship2. cognitive, technical and creative skills to investigate, analyse and synthesise complex information, problems, concepts and theories and to apply established theories to different bodies of knowledge or practice3. cognitive, technical and creative skills to generate and evaluate complex ideas concepts at an abstract level4. communication and technical research skills to justify and interpret theoretical propositions, methodologies, conclusions and professional decisions to specialist and non-specialist audiences5. technical and communication skills to design, evaluate, implement, analyse, theorise about developments that contribute to professional practice or scholarship technical and communicationskills to design, evaluate, implement, analyse, theorise about developments that contribute to scientific professional practice or scholarship Application of knowledge and skills Graduates of the Master of Genetic Counselling Degree will demonstrate the application of knowledge &amp; skills:1. with creativity and initiative to new situations in professional practice and/or for further learning2. with high level personal autonomy and accountability3. to plan and execute a substantial research-based project, capstone experience and/or piece of scholarship with creativity and initiative to new situations in professional scientific practice and/or for further learning to plan and execute a substantial research-based project</p>
<p><b>Professional Accreditation:</b></p>	<p>The <b>Master of Genetic Counselling</b> constitutes the professional qualification for entry into employment as an associate genetic counsellor, and for Part 1 certification, awarded through the Board of Censors in Genetic Counselling (Human Genetics Society of Australasia).</p>
