Subject Overview:	This subject provides students with the opportunity to integrate knowledge gained in the theoretical subjects with clinical practice in the neonatal intensive care setting. The subject provides a comprehensive approach to neonatal nursing care through understanding principles of illness/health management relating to the infant, child, adolescent and family. The students develop skills of assessment and management principles which enable them to progress to a more advanced level of practice. Students are given the opportunity to plan and coordinate care for patients with a wide variety of problems. There is a continued emphasis on scientific principles and research evidence underpinning practice and further developing of skills in problem-solving, critical thinking, rational inquiry and self-directed learning to solve patient management problems in specialty practice. The practical component is in the form of a learning contract whereby students address learning objectives. Learning objectives focus on undertaking accurate assessment of the neonatal patient and relating the underlying physiological and pathophysiological processes to assessment data; applying theoretical knowledge to technical skill development; developing evidence-based evaluations to the practice of caring for patients in the paediatric setting and developing skills in sharing knowledge with peers.						
Learning Outcomes:	Students will be expected to be able to demonstrate their specialty nursing practice through:						

	<ol style="list-style-type: none"> 1. Undertaking accurate assessment of the neonatal patient and relating the underlying physiological and pathophysiological processes to assessment data; 2. Apply the theoretical principles underpinning infant, child and adolescent development (physical, emotional and cognitive) when interacting with children and families; 3. Integration of the theoretical content to plan and implement appropriate nursing care in the paediatric setting; 4. Evaluate the effectiveness of nursing care and specialised interventions utilised in the neonatal setting and adapt the plan of care according to changing priorities; and 5. Participate effectively as a team member within the clinical setting.
Assessment:	6 x Clinical Skills Assessments (Distributed evenly across the year) - Hurdle A minimum of 2 clinical performance appraisals (one per semester) - Hurdle 1000 word reflective essay due Week 30 - 20% Patient Assessment and Care Plan x 2 (2000 words per plan) (one per semester) - 80%
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	<p>On completion of the subject students should have developed the following generic skills of the Melbourne graduate and graduate coursework student:</p> <ol style="list-style-type: none"> 1. A capacity to articulate their knowledge and understanding in oral and written modes of communication; 2. A capacity to manage competing demands on time, including self-directed project work. 3. Advanced competencies in areas of professional expertise and/or scholarship. 4. Advanced skills and techniques applicable to the discipline. 5. Well-developed problem-solving abilities in the discipline area, characterised by flexibility of approach. 6. An ability to evaluate and synthesise the research and professional literature in the discipline. 7. An appreciation of the ways in which advanced knowledge equips the student to offer leadership in the specialist area
