Subject Overview:	Improving global health in the long term requires a deep appreciation of the impact of environmental issues at local, national and global scales. Three key public health threats that require complex multidisciplinary solutions are climate change, water security, and nuclear weapons. Students of this subject will explore these interrelated planetary challenges, their profound implications for population health, and the demand for high level integrated problem solving in the coming decades.
Learning Outcomes:	On the completion of this subject students should be able to: # Critically assess the scientific principles and evidence of climate change impacts on health # Articulate the importance of water to health at local national and global levels # Analyse the health evidence and issues around nuclear energy, weapons and medical nuclear materials # Synthesize the inter-relationships between climate change, water security and nuclear energy, and the implications for health

Assessment:	Oral group presentation (4-5 students per group) of 20 minutes due on the last teaching day (20%); A critical analysis of 1000 words of a key article due 2 weeks after the last teaching day (20%); An essay of 3,000 words due six weeks after the last teaching day (60%) Hurdle Requirement: Attendance at a minimum of 80% is required to pass this subject.
Prescribed Texts:	Students will be issued key readings for this subject.
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	Upon completion of this subject, students will have developed skills in: <ul style="list-style-type: none"> # Critical thinking and analysis, # Finding, evaluation and using relevant information, # Problem-solving, # Written communication.
